

## TAKE CARE of YOUR JEWEL

Titanium is a metal and, as such, it may lose its brightness as time goes by.

Some cautions can help to maintain your jewel in all its beauty:

after wearing it, you should always put it back in its case,  
avoid scratching or denting it;  
avoid contact with detergents.

You can follow this simple advice to maintain your jewel in its original beauty:

do not clean it with alcohol or other aggressive products;  
wash it with water and neutral soap;  
carefully dry it, delicately using a soft cloth to cancel  
any halo or fingerprints.
